White label applications	The transformed delivery of a set of underlying data services does not deliver the end-user applications that should implement business logic. These applications would be delivered in a 'market place' of suppliers and users. Where there is a gap in the market place, the HO may provide a basic, generic application built on top of the data services. Such 'white-label applications' may be developed in house or by forces or suppliers as independent applications on top of the data services.
